"Genetic evaluation of the function of SNF1 in Candida tropicali
"Genetic evaluation of the EMBL/GenBank/DDBJ databases.

1- PUNCTION: ESSENTIAL FOR RELEASE FROM GLUCOSE REPRESSION: IT
INTERACTS AND HAS FUNCTIONAL RELATIONSHLP TO THE REGULATORY
PROTEIN SNF4. COULD PHOSPHORYLATES CATE (BY SIMILARITY).

1- SUBCELLULAR LOCATION: ASSOCIATED WITH THE NUCLEAR MEMBRANE (
SIMILARITY): BELONGS TO THE SER/THR FAMILY OF PROTEIN KINASES.

IN VITRO, IS AB
TO PHOSPHORYLATE CDC25C AND CASEIN.

CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
SUBUNIT: BINDS TO THE CALCIUM/INTEGRIN-BINDING PROTEIN (CIB). TH
INTERACTION PROBABLY OCCURS VIA THE POLD-BOX DOMAIN.

SUBCELLULAR LOCATION: Membranc-associated.

TISSUE SPECIFICITY: TRANSCRIPTS ARE HIGHLY DETECTED IN PLACENTA,
LUNG, POLLOWED BY SKELETAL MUSCLE, HEART, PANCREAS, OVARIES AND
KIDNEY AND WEAKLY DETECTED IN LIVER AND BRAIN MAY HAVE A SHORT
HALF-LIVE. IN CELLS OF HEMATOPOIETIC ORIGIN, STRONGLY AND
EXCLUSIVELY DETECTED IN TERMINALLY DIFFERENTIATED MACROPHAGES.
TRANSCRIPTS EXPRESSION APPEARS TO BE DOWN-REGULATED IN PRIMARY
TRANSCRIPTS EXPRESSION APPEARS TO BE DOWN-REGULATED IN PRIMARY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GO:0004674; P:protein serine/threonine kinase activity; TAS: GO:0006468; P:protein amino acid phosphorylation; TAS: GO:0000074; P:regulation of cell cycle; TAS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                INDUCTION: CYTOKINE AND CELLULAR ADHESION TRIGGER FNK INDUCTION PYM: PHOSPHORYLATED AS CELLS ENTER MITOSIS AND DEPHOSPHORYLATED CELLS EXIT MITOSIS (BY SIMILARITY).

SIMILARITY: BELONGS TO THE SER/THR FAMILY OF PROTEIN KINASES. CDC5/POLO SUBFAMILY.

SIMILARITY: Contains 2 POLO box domains.

"Expression and phosphorylation of fibroblast-growth-factor-inducible kinase (Fnk) during cell-cycle progression.";
Blochem. J. 33:655-660(1998).

-1- FUNCTION: SERIME/THREONIE PROTEIN KINASE INVOLVED IN REGULATING IPPROTEIN GROWTH CELL CYCLE. MAY ALSO BE PART OF THE SIGNALING NETWORK CONTROLLING CELLULAR ADHBSION. IN VITRO, IS ABLITO PHOSPHORYLATE CDC25C AND CASEIN (BY SIMILARITY).

-1- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
-1- SUBUNIT: BINDS TO THE CALCIUM/INTEGRIN-BINDING PROTEIN (CIB). THIS INTERACTION PROBABLY OCCURS VIA THE POLO-BOX DOMAIN (BY

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CNK OR PNK.
                                                                                                                                                                                                                                                                                                                                  FUNCTION: SERINE/THREONINE PROTEIN KINASE INVOLVED IN REGULATING PHASE FUNCTIONS DURING THE CELL CYCLE. MAY ALSO BE PART OF THE SIGNALING NETWORK CONTROLLING CELULLAR ADRESION. IN VITRO, IS ABLIO TO PHOSPHORYLATE CDC25C AND CASEIN (BY SIMILARITY).

CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein. SUBUNIT: BINDS TO THE CALCIUM/INTEGRIN-BINDING PROTEIN (CIB). THI INTERACTION PROBABLY OCCURS VIA THE POLO-BOX DOMAIN.

SUBCELLULAR LOCATION: WHEN INDUCED, IT TRANSLOCATES INTO THE DENNEITES OF ACTIVATED NEURONS.
                                                                                                                                                                                                                    INDUCTION: BY THE INTENSE ACTIVITY ASSOCIATED PTM: PHOSPHORYLATED AS CELLS ENTER MITOSIS AND CELLS EXITY MITOSIS (BY SIMILARITY). SIMILARITY: BELONGS TO THE SER/THR FAMILY OF FCDC5/POLO SUBFAMILY.
SIMILARITY: Contains 2 POLO box domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   297

J. Biol. Chem. 268:14443-14449(1993).

-I. FUNCTION: THIS KINASE MAY PLAY A ROLE IN NEUROTRANSMISSION.
-I. CATALYTIC ACTIVITY: ATP + protein = ADP + O-phosphoprotein.
-I. ENZYME REGULATION: AUTOPHOSPHORYLATION OF CAM-KINASE II PLI-
IMPORTANT ROLE IN THE REGULATION OF THE KINASE ACTIVITY.
-I. SUBUNIT: COMPOSED OF FOUR DIFFERENT CHAINS: ALPHA, BETA, G
                                                                                                                                                                                                                                                                                                                                BINDING

UC1446

Berline/threonine-specific protein kinase (EC 2.7.1.-) AK21 - Arabel Arabethreonine-specific protein kinase SNF1 homolog

NyAlternate names: protein kinase SNF1 homolog

C.Species: Arabidopsis thallana (mouse-ear cress)

C.Species: Arabidopsis thallana (mouse-ear cress)

C.Species: 30-Sep_1993 #seguence revision 30-Sep_1993 #text_change

C.Accession: UC1446; S58266; $66334

C.Accession: UC1446; S58266; $66334
                                                                                                                                                                                                                                                                                                                                                                    A;Molecule type: DNA
